Washington State Department of Agriculture STRATEGIC PLAN

2005-2007

WSDA Mission Statement

WSDA serves the people of Washington State by supporting the agricultural community and promoting consumer and environmental protection.

Major Goals and Strategies

- Goal 1: Protect and reduce the risk to public health by assuring the safety of the state's food supply.
- **Strategy 1**: Monitor, inspect, test, and provide technical assistance to Washington state's food processing and storage industry.
- Goal 2: Ensure the safe and legal distribution, use, and disposal of pesticides and fertilizers in Washington state.
- **Strategy 2:** Regulate, educate and provide technical assistance within Washington state on the appropriate use of pesticides and fertilizers.
- Goal 3: Protect Washington state's natural resources, agriculture industry, and the public from selected plant and animal pests and diseases.
- **Strategy 3:** Inspect, detect, control and/or eradicate selected animal and plant diseases and other pests (weeds and insects).
- Goal 4: Facilitate the movement of Washington agricultural products in domestic and international markets.
- **Strategy 4:** Inspect, test, and certify agricultural commodities to facilitate movement and sales and assist growers and agri-businesses to enter new markets.

Total			37,025,712		37,025,712	332.7

Fruit and Vegetable Inspection

The Fruit and Vegetable Inspection program provides inspection services to the fresh produce and processing industry to ensure orderly marketing of fruits and vegetables. Commodities inspected include, but are not limited to, apples, pears, cherries, peaches, asparagus, and potatoes. These commodities are inspected for quality, size, labeling, condition, and contract specifications and may be certified as free from disease and insects as required by domestic and international markets. These services are provided through district offices in Yakima and Wenatchee and 10 field offices located throughout the state. This is a self-supporting, fee-for-service program.

Grain Inspection

The Grain Inspection program provides inspection, analytical and weighing services to ensure orderly commerce for grain, dry peas, dry beans, lentils, rapeseed, and similar commodities sold in or from Washington. These services are provided at eight grain inspection facilities located throughout the state (Seattle, Tacoma, Olympia, Kalama, Vancouver, Pasco, Spokane, and Colfax). The program is funded by fees for service and, as required by federal law, provides service 24 hours a day, seven days a week, upon request.

Grain Warehouse Audit

The Grain Warehouse Audit program protects grain producers from undue losses by requiring licensing and bonding of warehouses and dealers and by auditing each licensee. The program audits grain storage warehouses and grain dealers to assure producers and depositors that licensees are meeting requirements to cover storage and contractual obligations. This program is funded by license fees.

Seed Inspection/Certification

The Seed Inspection/Certification program conducts pre-harvest field inspections and laboratory testing of agricultural, vegetable and flower seeds grown under the seed certification program. The program tests seed samples submitted by seed growers and companies to determine compliance with purity and germination standards and to certify seed for domestic and international marketing. The program operates the only official seed testing laboratory in the state in Yakima. This is a self-supporting, fee-for-service program.

Food Safety, Animal Health & Consumer Services

Fo		Animal Healt Biennium Esti			s

Total	7,615,092	2.791.567	6,143,381	1,125,000	17,675,040	110.4

Animal Health

The Animal Health program protects animals and the public from communicable animal diseases, such as brucellosis, tuberculosis, E. coli 0157:H7, salmonella (various types), rabies, Hantavirus, and many others. To prevent animal diseases from entering Washington State, the program monitors the movement of animals across state lines by inspecting and examining animals, issuing or denying requested permits, and monitoring health certificates which are required for all animals entering the state. Department veterinarians also conduct tests and inspections to detect introduced diseases and to eliminate select diseases.

The program is responsible for emergency management planning to ensure the state is prepared to trace back and control introduced foreign animal diseases. The program cooperates with universities, the U.S. Department of Agriculture and other research agencies to collect samples and data. This program is funded by the state general fund and federal grants.

Food Safety

The Food Safety program strives to protect the public from injury and illness caused by food products that are contaminated, adulterated or otherwise unfit for consumption. This is accomplished through surveillance, regulation and inspection of the dairy industry, the egg industry, and the food processing and storage industry. Inspectors examine facilities for such things as product adulteration, cleanliness, evidence of rodent infestation, potential for cross contamination with chemicals and toxic materials, appropriate holding temperatures, and sanitary preparation techniques. Inspectors also candle and weigh eggs to determine if they meet quality and grade standards.

Staff conducts more than 13,000 inspections and tests each year, including sampling food products which are analyzed for pathogens, pesticide residues and standards. The program also investigates consumer complaints and responds as needed to food-related emergencies. The program is funded by the state general fund, federal funds, and fees paid by food processors, food storage warehouses, milk processors and the egg industry.

Livestock Identification

The Livestock Identification program maintains the official recordings of approximately 6,000 livestock brands. As a theft prevention measure, cattle and horses are inspected for brands or other proof of ownership at all public livestock markets and slaughter plants and prior to moving out of state. Inspection is also required for cattle at certified feed lots and at any change of ownership. Approximately 650,000 cattle and 15,000 horses are inspected annually.

The program licenses and bonds public livestock markets to ensure producers receive timely and proper payment for livestock they sell through those facilities. Certified feed lots are licensed and audited monthly to ensure that all slaughtered cattle correlate with inspection certificates issued on their behalf. The program is funded by fees paid by the livestock industry.

Livestock Nutrient Management

This program provides assistance, inspects the state's 600 dairy farms, and takes action to ensure animal feeding operations comply with state and federal water quality laws. It is funded by the water quality, water quality permit and livestock nutrient management accounts.

Microbiology Laboratory

The Microbiology Laboratory, located in Olympia, supports the department's Food Safety program by testing food and dairy products for food poisoning organisms and by examining food products for contamination by insects, rodents or filth. The laboratory also tests dairy products for quality and to meet requirements for the interstate shipment of milk. Staff inspect and certify private laboratories performing officially sanctioned dairy microbiology.

The Microbiology Laboratory also supports the department's Animal Health program by testing animal blood and tissue for disease to aid in disease eradication programs and to allow animals to move interstate or internationally. The laboratory participates in a federally funded program to monitor for pathogenic organisms in the nation's food supply, and performs diagnostic and export testing for private veterinarians on a fee-for-service basis. All other activities are supported by the state general fund.

Organic Food Certification

The Organic Food Certification program protects consumers and supports the organic food industry by ensuring that all food products making organic claims meet state standards for organic production and labeling. The program inspects, certifies and provides technical assistance to more than 850 organic producers, processors, and handlers. The certification program is funded entirely by fees paid by the organic industry.

Pesticide Management

		Pesticide Ma Biennium Esti	_	ditures		
Activity	General Fund State	General Fund Federal	Local Funds	Other Funds	Total	Annual FTEs

Total	805,481	1,116,905	6,730,458	3,246,275	11,899,119	67.6

Feed Regulation

The Commercial Feed program regulates the distribution of animal feeds to assure product identity and quality and proper labeling. The program registers and reviews the labels of more than 2,000 pet food products and licenses approximately 500 manufacturers and initial distributors of other animal feed products. The program inspects feed mills for compliance with current good manufacturing practices, especially in the manufacturing of medicated feeds. The program also collects and analyzes feed samples to determine accuracy of label guarantees. The program is funded primarily by licensing, registration and tonnage fees paid by the feed industry.

Fertilizer Regulation

The Commercial Fertilizer program is a consumer and environmental protection program. The program registers and reviews the label of more than 4,000 fertilizer products for distribution in the state, and collects and analyzes fertilizer samples to determine accuracy of label guarantees for plant nutrients. The program also analyzes fertilizer samples for heavy metals to ensure they do not exceed state standards. The program inspects fertilizer facilities and irrigation systems where fertilizer is applied through irrigation water to ensure required safeguards are in place to prevent ground water and surface water contamination. The program is funded entirely by licensing, registration and tonnage fees paid by the fertilizer industry.

Pesticide Regulation

The Pesticide program regulates the sale and use of all pesticides in Washington State. The program is organized into three subprogram areas: Registration, Compliance and Program Development.

- The *Compliance* subprogram investigates complaints of pesticide misuse, conducts field inspections of pesticide manufacturers and applicators, and provides technical assistance to pesticide users. Compliance field staff are located in Olympia, Yakima, Wenatchee, Moses Lake and Spokane.
- The *Registration* subprogram reviews and registers more than 11,000 pesticide products for use in the state, and processes about 60 requests for special pesticide registrations. In 2001, it initiated a program to evaluate and address the potential impact of pesticide exposure on Endangered Species Act (ESA)-listed salmon. The Endangered Species Program collects and provides federal agencies with information relevant to Washington pesticide use. This includes site-specific pesticide use data, surface water monitoring data, and commodity and salmonid mapping data.
- The *Program Development* subprogram tests, licenses and administers a continuing education program for more than 25,000 pesticide applicators, dealers and consultants. It administers a program to train Spanish-speaking farm workers in safe and legal use of pesticides, and administers the waste pesticide program, which collects and disposes of canceled, suspended or unusable pesticides from state residents and businesses. It also develops programs to protect resources such as ground water from pesticide or fertilizer contamination.

The program works closely with other state and federal agencies on pesticide-related issues. The program is funded by licensing and registration fees, federal grants, the state general fund and the state toxics control account.

Plant Protection

Total	5,673,837	4,525,576	6,345,021	2,206,000	18,750,434	104.0

Chemistry Laboratory

The Chemistry Laboratory, located in Yakima, supports several Department programs by analyzing samples taken in investigations of alleged pesticide misuse, monitoring for pesticide residues in foods, and analyzing commercial feed and fertilizer samples to determine if they meet label guarantees. These activities are funded by a mix of state, federal and local funds. The laboratory also participates in a federally funded program for monitoring pesticide residue levels in fruits, vegetables, and other commodities in the American diet and performs fee-for-service chemical analysis for the hop industry.

Commission Merchants

The Commission Merchants program protects agricultural producers against theft, fraud and unfair business practices by licensing persons and businesses involved in buying and selling agricultural products. Licensees who purchase by check or on credit or who handle agricultural products on consignment must be bonded. The program investigates producer complaints against commission merchants and cooperates with federal, state and local law enforcement agencies. The program is funded by license fees.

Hop Inspection

The Hop Inspection program performs physical grading and chemical analysis of the Washington hop crop and a significant portion of the Oregon and Canadian crops to ensure orderly international and domestic marketing for the industry. Washington growers produce 75 percent of the nation's hops. This is a self-supporting program, funded by fees paid by hop producers and dealers for requested services.

Nursery Inspection

The Nursery Inspection program inspects nurseries to ensure that consumers and the nursery industry are provided healthy, pest-free and disease-free plant materials. The program enforces agricultural quarantines to prevent pest introduction and, on request, provides inspection services to certify Washington nursery stock and plant materials are free from disease and insects as required by domestic and international markets. The program is funded by license fees paid by the state's 8,000 nursery dealers and fees paid for requested inspections.

Plant Protection (Pest Program)

The goal of the Pest program is to protect the state's resources by preventing the establishment of high-risk insects, plant diseases and weeds. Staff conduct surveys and inspections, disseminate information and research, enforce agricultural quarantines, provide laboratory diagnostic services, review and permit the release of certain insects and exotic plant pathogens, and carry out projects to eradicate pests such as gypsy moth and citrus longhorned beetle.

The program coordinates statewide efforts to control purple loosestrife and to eradicate spartina, both non-native aquatic weeds, and to control Japanese knotweed in southwest Washington. It works with the State Noxious Weed Control Board and is responsible for noxious weed control in counties without weed boards. The State Noxious Weed Control Board sets control priorities and coordinates educational and control activities of weed districts, county weed boards, and state and federal agencies. The program is funded by a mix of state, federal and local funds and works cooperatively with local, state and federal government agencies.

Planting Stock Certification

The Planting Stock Certification program provides testing and inspection services to assure disease-free planting stock for various agricultural industries. Voluntary certification programs are currently provided for fruit trees and related ornamentals, seed potatoes, hops, grapes, mint, garlic, caneberries, and strawberries. This is a self-supporting, fee-for-service program.

Weights and Measures Inspection

The Weights and Measures program regulates the use and accuracy of all commercial weighing, measuring and counting devices used in the state, including gas pumps, grocery store scale systems, price scanners, vehicle-tank meters and liquid petroleum gas measuring devices. Staff inspects and test devices for accuracy and suitability for service and inspects packaged commodities for correct content (expressed in net weight, volume or count), labeling, and pricing.

The program operates the state Metrology Laboratory, which houses the official state standards of weights and measures, and provides calibration services to businesses, laboratories, and government entities. The program licenses individuals as weighmasters to provide certified statements of weight, measure, or count and monitors motor fuel quality by analyzing fuel samples for octane, oxygenate and other product quality factors. Staff also investigate consumer complaints in commercial transactions. The program is funded by registration, licensing and calibration fees, the state general fund and, for motor fuel quality testing, the state motor vehicle account.

Market Development

		/larket Develo	•	litures		
Activity	General Fund State	General Fund Federal	Local Funds	Other Funds	Total	Annual FTEs

Total	6,258,188	1,576,000	-	5,352,000	13,186,188	11.2

Agricultural Promotion and Protection

This activity provides funding for the "From the Heart of Washington" program and other activities that promote the sale of the state's food and agricultural products. It also includes one-time moneys appropriated for specific projects that assist the state's agricultural industry, including projects on automating and mechanizing the asparagus industry, new hop harvesting technologies, and wine marketing.

Agricultural Fairs

The Fairs program provides financial assistance to agricultural fairs and youth shows. The Director of Agriculture appoints a seven-member Fairs Commission to recommend how the funds are allocated to participating fairs. The Fairs program coordinates the activities of the Fairs Commission, audits all required reports and information from participating fairs, and verifies that fairs operate in compliance with state law. Currently, 70 fairs participate in the program, which provides approximately \$2 million in assistance annually.

Commodity Commissions

This program administers agency responsibilities related to the state's 24 agricultural commodity commissions. Each commission is funded by producers and engages primarily in marketing and/or research related to its specific commodity. The Director of Agriculture is a board member of each commission. The program reviews and approves commission programs and budgets; supervises or coordinates the nomination, election or appointment of Commission members; and oversees the issuance, amendment or termination of commission marketing orders.

International Marketing

The International Marketing program assists food and agriculture companies to sell their products internationally. The program contracts with agricultural trade representatives in the major markets of Japan, Taiwan, China and Southeast Asia to assist state businesses with export transactions and market development. The program offers one-on-one assistance to export-ready businesses; organizes and leads companies on trade missions and to major trade shows; and develops and distributes information to buyers on the state's agricultural suppliers. The program also coordinates the department's economic development and domestic marketing efforts.

The program works closely with agricultural commodity commissions and the Governor's Trade Representative's office to fight trade barriers that prevent or limit overseas market access for Washington's agricultural and food products. The program is funded by the state general fund and grants and works cooperatively with the Department of Community, Trade, and Economic Development and the U.S. Department of Agriculture.

Small Farm and Direct Marketing

The Small Farm and Direct Marketing program works to improve the viability of the state's small farms by reducing market barriers and developing or enhancing direct marketing opportunities for farmers. It is funded by the state general fund and federal grants.

Agency Operations

Agency Management/Administrative Support Services

This activity provides executive leadership, policy development and review, financial services, computer and information technology services, personnel services, communications, administrative procedures guidance, legal services, homeland security, and safety and emergency management programs for the department's 25 programs. The budget amounts for this activity are the overhead component of agency administrative costs.
